

Syllabus: Linear Algebra II

MATH 425 Linear Algebra II, Spring 2009
LCD-undergrad 24908; LCD-grad 24909,
MWF 9:00-9:50, 305 2TH

Instructor: Shmuel Friedland

Office: 1215 SEO, phone: 413-2159, *e:mail*: friedlan@uic.edu,
web: <http://www.math.uic.edu/~friedlan>

OFFICE HOURS: 12:30-1:30 MW or by appointment.

TEXT: I will supply lecture notes based on lecture notes on Math 310, Math 320, Math 494 and my book in preparation "Matrices". See my teaching web site.

<http://www.math.uic.edu/~friedlan/teaching.html>

For problems I will use "Schaum's Outline of Linear ALgebra" by S. Lipschutz and M. Lipson, 4th edition.

PREREQUISITE: Math 320 or Math 310, (first course in Linear Algebra) or its equivalent.

1 Introduction

Theory of Matrices is well recognized subject in mathematics and its applications to: applied mathematics, biology, computer science, engineering, physics and various social sciences. *Math 425* is the second course on Linear Algebra. It will give students an exposure to more advanced topics which are the most used in theory and applications. We will give applications of each topic.

2 Topics of the course

1. Jordan Canonical form and spectral theory for matrices over complex numbers.
2. Inner product spaces
 - (a) Basic results on inner product spaces and linear operators.
 - (b) Spectral decomposition of normal operators in finite dimensional inner product spaces, i.e. diagonalization of normal matrices by a unitary matrix.
 - (c) Mini-max characterizations of eigenvalues of hermitian matrices.
 - (d) Singular Value Decomposition and Moore-Penrose inverse.
3. Perron-Frobenius theorem for nonnegative matrices.

3 GRADING

1. Quizzes and Homework - 15%. (Usually there would be 10 minutes quiz in the end of the class once a week, except the first week of classes, and the exam weeks.)
2. Two Exams - 20% each.
3. Final Exam - 45%.
