Dialectical Model Theory

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property Excellence Covers **Thesis** Model theory is a technique for solving problems in mainstream mathematics, usually involving structures of small cardinality.

Antithesis Model theory is a branch of mathematics in its own right. In particular, it explores the 'higher infinite'.

Synthesis The insights developed in exploring the Antithesis repeatedly enrich the Thesis. This leads to new 'pure' explorations.

The 70's

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property Excellence

Covers

Stability theory developed

- 1 abstractly with the stability classification
- 2 concretely by finding the stability class of important mathematical theories and using the techniques of the abstract theory.

The absoluteness of fundamental notions such as \aleph_1 -categoricity and stability liberated first order model theory from set theory.

Today the higher infinite means: greater than \aleph_{ω} or even,

Greater than $\aleph_1!$

Generalized Amalgamation

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property Excellence The crucial notion is generalized amalgamation.

In this talk, we discuss developments of generalized amalgamation and connections between the first order and infinitary versions.

First Order and Infinitary Model Theory: Obtaining Amalgamation

John T. Baldwin

The Amalgamation Property Excellence

Covers

Three unary predicates, W, F, I partition the set. Let W and I be countably infinite sets and fix an isomorphism f_0 between them.

J. Knight's construction

F is the collection of all bijections between W and I that differ from f_0 on only finitely many points.

Add also a successor function on W so that (W, S) is isomorphic to ω under successor and the evaluation predicate E(n, f, i) which holds if and only if $n \in W, f \in F, i \in I$ and f(n) = i.

The resulting structure M is atomic and minimal. Since every permutation of I with finite support extends to an automorphism of M, I is a set of indiscernibles.

An orthogonal notion

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property

Excellence

Covers

Definition (R. Knight)

A sentence σ of $L_{\omega_1,\omega}$ is amalgamative in a fragment Δ if for any complete Δ -types, $p(\mathbf{x}, y)$, $q(\mathbf{x}, z)$, $r(\mathbf{x})$ such that r is the common restriction of p and q, there is an $s(\mathbf{x}, y, z)$ that restricts to both p and q.

For any sentence σ , let Δ^{α} ($\alpha < \omega_1$) be the Morley/Scott expansions of Δ .

Theorem (R. Knight)

If σ has uncountably many models then for a cub C, for any $\alpha \in C$, σ is amalgamative in Δ^{α} .

A class (\mathbf{K}, cl) is *quasiminimal excellent* if cl is a combinatorial geometry which satisfies on each $M \in \mathbf{K}$:

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

1 there is a unique type of a basis,

2 a technical homogeneity condition:
 ℵ₀-homogeneity over Ø and over models.

3 and the 'excellence condition' which follows.

Conditions 1 and 2 are sufficient for \aleph_1 -categoricity.

Necessary Notation

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property

Excellence

Covers

In the following definition it is essential that \subset be understood as proper subset.

Definition

- 1 For any Y, $\operatorname{cl}^{-}(Y) = \bigcup_{X \subset Y} \operatorname{cl}(X)$.
- We call C (the union of) an n-dimensional cl-independent system if C = cl⁻(Z) and Z is an independent set of cardinality n.

Essence of Excellence

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property

Excellence

Covers

There is a primary model over any finite independent system.

Let $C \subseteq H \in \mathbf{K}$ and let X be a finite subset of H. We say $\operatorname{tp}_{qf}(X/C)$ is *defined over* the finite C_0 contained in C if it is determined by its restriction to C_0 .

Quasiminimal Excellence

Let $G \subseteq H, H' \in \mathbf{K}$ with G empty or in \mathbf{K} . Suppose $Z \subset H - G$ is an *n*-dimensional independent system, $C = cl^-(Z)$, and X is a finite subset of cl(Z). Then there is a finite C_0 contained in C such that $tp_{qf}(X/C)$ is defined over C_0 .

QM EXCELLENCE IMPLIES CATEGORICITY

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property

Excellence

Covers

QM Excellence implies by a direct limit argument:

Lemma

An isomorphism between independent X and Y extends to an isomorphism of cl(X) and cl(Y).

This gives categoricity in all uncountable powers if the closure of finite sets is countable.

Methodology

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property Excellence

Amalgamation for independent families of models is a key to Zilber's algebraic proofs of quasiminimal excellence.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

But Shelah had already seen a bigger picture.

General Setting

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property

Excellence

Covers

An amalgamation problem is a functor \mathcal{A} taking $\mathcal{P}(n)^-$ into a family \mathcal{A} of subsets of models in a class. Some notion of independence is assumed.

General Setting

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property Excellence Covers An amalgamation problem is a functor \mathcal{A} taking $\mathcal{P}(n)^-$ into a family \mathcal{A} of subsets of models in a class. Some notion of independence is assumed.

An amalgamation solution is an extension \overline{a} of a to map $\mathcal{P}(n)$ into $\mathcal{A}F$ such that:

 $\{\overline{\boldsymbol{a}}(u): u \subset n\}$

is an independent system contained in $\overline{a}(n)$.

The formulation and examples are derived from Hrushovski and Kolesnikov.

3 properties

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property

Excellence

Covers

n-existence

Every $\boldsymbol{\mathcal{A}}$ from $\mathcal{P}(n)^-$ has a solution.

Weak *n*-Uniqueness

Any two solutions for any $a are compatible over {<math>\overline{a}(u) : u \subset n$ }.

n-Uniqueness

Any two solutions for any \mathcal{A} are isomorphic over $\{\overline{\mathcal{A}}(u) : u \subset n\}.$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

$L_{\omega_1,\omega}$ and 'first order' model theory

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamatior Property

Excellence

Covers

The models of a complete sentence in $L_{\omega_1,\omega}$ can be represented as:

K is the class of atomic models (realize only principal types) of a first order theory.

We study $S_{at}(A)$ where $A \subset M \in \mathbf{K}$ and $p \in S_{at}(A)$ means Aa is atomic if a realizes p.

Two Examples

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property

Excellence

Covers

 T_1 is the theory of an infinite set under equality. $M \models T$. p asserts $x \neq m$ for every $m \in M$. Then $p \in S_{at}(A)$.

(Marcus/J. Knight): There is a model M which is atomic, minimal and contains an infinite indiscernible set.

Every $p \in S_{at}(M)$ is realized in M.

$L_{\omega_1,\omega}$: The General Case

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property

Excellence

Covers

Quasiminimality is the rank one case

Any geometry has a notion of independent *n*-system.

In the more general setting

Splitting gives an analogous notion of independent *n*-system.

Goodness

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamatior Property

Excellence

Covers

Definition

A set A is good if the isolated types are dense in $S_{at}(A)$.

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

For countable A, this is the same as $|S(A)| = \aleph_0$.

Are there prime models over good sets?

Goodness

> John T. Baldwin

The Amalgamatior Property

Excellence

Covers

Definition

A set A is good if the isolated types are dense in $S_{at}(A)$.

For countable A, this is the same as $|S(A)| = \aleph_0$. Are there prime models over good sets? YES, In \aleph_0 and \aleph_1 but not generally above \aleph_1 (J. Knight, Kueker, Laskowski-Shelah).

Yes, if excellent.

Excellence

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property

Excellence

Covers

Definition

 K is (λ, n)-good if for any independent n-system S (of models of size λ), the union of the nodes is good.

That is, there is a prime model over any countable independent *n*-system.

2 K is *excellent* if it is (\aleph_0, n) -good for every $n < \omega$.

Excellence implies large models

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property

Excellence

Covers

Shelah proved:

Theorem

Let λ be infinite and $n < \omega$. Suppose **K** has $(<\lambda, \le n+1)$ -existence and is (\aleph_0, n) -good. Then **K** has (λ, n) -existence.

Excellence implies large models

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property

Excellence

Covers

Shelah proved:

Theorem

Let λ be infinite and $n < \omega$. Suppose **K** has $(< \lambda, \le n+1)$ -existence and is (\aleph_0, n) -good. Then **K** has (λ, n) -existence.

This yields:

Theorem (ZFC)

If an atomic class ${\bf K}$ is excellent and has an uncountable model then

1 it has models of arbitrarily large cardinality;

2 if it is categorical in one uncountable power it is categorical in all uncountable powers.

'Universal' Classes -propagation

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property

Excellence

Covers

Let ${\bf K}$ be defined by universal sentences and the omission of types.

Theorem B-Kolesnikov-Shelah

For any $s < \omega$, if \mathbf{K}_k has the $(\lambda, \leq s + 1)$ disjoint amalgamation property, then it has the $(\lambda^+, \leq s)$ -disjoint amalgamation property.

Thus $(\aleph_0, < \aleph_0)$ disjoint amalgamation implies **K** has arbitrarily large models and disjoint amalgamation (of pairs).

'Universal' Classes -Limitations

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamatior Property

Excellence

Covers

Theorem B-Kolesnikov-Shelah

There is a 'universal' K_k such that:

- **1** \mathbf{K}_k has no models of cardinality greater than \beth_k .
- **2** \mathbf{K}_k has the disjoint amalgamation property on models of cardinality less than or equal to $\aleph_{(k-3)}$.

3 \mathbf{K}_k has models of cardinality $\aleph_{(k-1)}$.

Theorem B-Kolesnikov-Shelah

For every countable ordinal α , there is a 'universal' class \mathbf{K}_{α} that has disjoint amalgamation over pairs of models of size $\leq \aleph_{\alpha}$. But \mathbf{K} has no model of power $\beth_{(2^{\aleph_0})^+}$.

Abstract Elementary Classes

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property

Excellence

Consider a class of *L*-structures and a notion of 'strong submodel' $\prec_{\mathbf{K}}$.

 $(\prec_{\mathbf{K}}, (\mathbf{K}, \prec_{\mathbf{K}})$ is an *abstract elementary class* if both \mathbf{K} and the binary relation $\prec_{\mathbf{K}}$ are closed under isomorphism and satisfy a collection of conditions generalizing those of Jónnson for constructing homogeneous universal models.

In particular, the class must be closed under $\prec_{\ensuremath{\mathsf{K}}}\xspace$ -increasing chains.

A further crucial requirement is the existence of a Löwenheim number for the class.

GALOIS TYPES: Algebraic Form

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property

Excellence

Covers

Suppose K has the amalgamation property. Then there is a monster model $\mathcal{M}.$

Definition

Let $M \in \mathbf{K}$, $M \prec_{\mathbf{K}} \mathbb{M}$ and $a \in \mathbb{M}$. The Galois type of a over M is the orbit of a under the automorphisms of \mathbb{M} which fix M.

We say a Galois type p over M is realized in N with $M \prec_{\mathbf{K}} N \prec_{\mathbf{K}} \mathbb{M}$ if $p \cap N \neq \emptyset$.

Tameness-Algebraic form

Refining the Model theoretic analysis

First Order and Infinitary Model Theory: Obtaining Amalgamation

> John T. Baldwin

The Amalgamation Property

Excellence

Covers

Consider $T_A + \Lambda = Z^N$:

1) all \mathbb{A}

- a) has 2-amalgamation;
- b) has arbitrarily large models;
- 2) Identify algebraic properties corresponding exactly to small, $\omega stable$, \aleph_0 -homogeneity over models, excellence.

3) Do these properties differentiate algebraic groups in a natural way?

Will more model theory help?

First Order and Infinitary Model Theory: Obtaining Amalgamation Application of Theorem of Grossberg-Kolesnikov If an ω -stable atomic class has (\aleph_0, n) -weak uniqueness for all *n*, then it is (\aleph_0, ∞) -tame.

Covers

Still more model theory

First Order and Infinitary Model Theory: Obtaining Amalgamation

The Amalgamation Property

Excellence

Covers

Recall

Theorem (Lessmann)

If K with $LS(K) = \aleph_0$ is \aleph_1 -categorical and (\aleph_0, ∞) -tame then K is categorical in all uncountable cardinals

So if we establish weak-uniqueness in (\aleph_0, n) for all n for an algebraic group \mathcal{A} , we can conclude the 'arithmetic' consequences on $\mathcal{A}(k)$ for all k (modulo Shelah's theorem and VWGCH)
